

```

let var1= 10
let var2= 20

function addNum(num1, num2){
  let total = num1+num2
  return total
}

let result1=addNum(var1, var2)
let result2=addNumber(3,4)

```

1) Global Execution -> this

2) Memory Phase

var1 => undefined

var2 => undefined

addNum => definition

result1=> undefined

result2=>undefined

3) Execution Phase

Var1 =>10

Var2=>20

Add Num =>

New variable
environment
+ execution thread
